

Compuscore ABC

Suite of highly predictive credit bureau scores.

Assessing the credit risk of consumers is a costly and technically daunting process. Compuscore ABC provides subscribers with quantifiable risk measurement, giving them the power to make better lending decisions.

Compuscore assesses credit risk across the entire credit life cycle: Acquisition, Behavioural risk, and Collections. It helps lenders make accurate, reliable and fast credit risk decisions across the customer life cycle.

Compuscore ranks consumers by how likely they are to pay their credit obligations. Compuscore is critical in millions of lending decisions, and is used confidently by blue chip companies to SMEs and consumers alike.

How it works

Compuscore ABC was built using advanced statistical modelling software and bases its predictions on our big data sets and Pinpoint Variables. The predictive modelling technique used ensures highly predictive scorecards and interpretable score bands. Compuscore is being continuously developed and monitored making it an extremely powerful tool. It is predictive across the entire financial service industry and across all industry market verticals. Compuscore is a measure of a consumer's or business' creditworthiness, summarised neatly by a single number, known as a score. Compuscore is used to determine whether or not an individual is likely to default on a loan, mortgage, or settlement of their telephone bill or any other debt.

5 Reasons to make use of Compuscore

- Calibrate your score for a tailored solution
- Monitor behaviour and predict risk throughout the credit life cycle
- Identify risk across all industry verticals
- NCA compliancy and improved customer service
- Calculate current and retrospective scores
